## Richland Community College

### All-Campus Exterior Lighting Upgrades

Recently, three SEDAC staff members visited Richland Community College to see their new exterior LED lighting. Approximately 250 metal halide and high pressure sodium fixtures were replaced, including parking lot lighting, wallpacks, decorative lighting, floodlamps, bollards, and area lights. In the parking lot, Richland was able to replace double-pole fixtures with single-pole due to the increase in light from the new fixtures. The campus was able to cut the total wattage of its exterior fixtures in half.

#### In Their Words:

*"Richland worked with SEDAC to do the initial energy audit which identified this exterior lighting project. Working with the SEDAC staff from the initiation of this project through its completion has been a positive experience. The addition of the new lighting has enhanced the appearance of our campus and is providing a more sustainable solution for Richland." - Greg Florian, Vice President of Finance & Administration, Richland Community College*
