

What energy codes and standards does your state use? Exercise: Finding different states' energy codes

Let's practice finding out which energy codes apply different states!

Start by visiting [Building Energy Codes Program's Status of State Energy Code Adoption page](#).

1. On the U.S. map, which color represents the states who have adopted the most current energy codes or standards? What color represents the states who have adopted the least current energy codes or standards? What is the color for no statewide code?

Next, scroll down to the State Adoption button.

2. Can you find three states that have adopted the 2018 IECC for both commercial and residential? List them.

3. Can you find a state that bases their code on ASHRAE 90.1 or 90.2?

4. What do you think are some reasons why some states don't have a statewide code?
