

Safer Food Packaging

for Chicagoland Businesses

*DECREASING EXPOSURE
TO HARMFUL CHEMICALS
IN FOODWARE*

Join Our PFAS-Free Foodware Pilot Program!

We invite your business to participate in a **no-cost** program piloting PFAS-free, single-use foodware.

Beware of PFAS in your takeout containers! Per- and Polyfluoroalkyl Substances (**PFAS**) are harmful chemicals often found in the coatings of single-use foodware. These harmful chemicals can migrate into your food, leading to serious health risks like reproductive issues, developmental delays, and increased cancer risk. Choose your food packaging wisely to protect your health.

Our Mission:

- **Reduce exposure to PFAS** for customers and employees.
- Increase access to **safer, compostable foodware** that is cost-competitive.
- Help businesses like yours to **become more sustainable**.

What's in it for your business?

- **A no-cost foodware assessment** including cost and savings estimates.
- Access to **safer substitution options**.
- Complimentary PFAS-free **products for testing**.
- **Recognition** of your business' commitment to safer, eco-friendly foodware.

**BECOME A
PFAS-FREE
BUSINESS
LEADER**

**Sign up here to
participate!**
